- JavaScript
- C++
- HTML & CSS
- PHP
- C
- Ruby
- C#

Technologies

- jQuery
- OpenGL & WebGL
- Node.js
- Ruby on Rails
- Git or SVN
- MongoDB
- MySQL
- *NIX

Work Experience

Yahoo!

Jun 2013 - Sep 2013

Software Engineering Intern

I implemented the ability to create a universal theme for the Yahoo! Sports site, allowing for the recent site redesign. My work allowed other Yahoo! properties, including Weather and Movies, to also easily change their themes. I also created an internal tool for writers and editors to use that would allow them to dynamically create sports infographics. I additionally extended this tool to modernize the Stats page of the Sports site. I worked primarily in PHP, HTML & CSS, and some JavaScript.

Starbucks

Jul 2012 - Sep 2012

Technology Intern

I implemented the location services and database for an update to the API for the Starbucks mobile app. I wrote in C#, working within the ASP.NET MVC 4 framework, and used MongoDB for the new database. I also provided IT support for issues ranging from MS Office help to removing viruses.

Central Catholic HS

Jul 2009 - Jun 2011

IT Support

I provided IT support for teachers. Additionally, I sat on a subcommittee of the school board as a student consultant on matters of technology direction and funding.
